## #ENTREPRENEUR

Hi, I'm Aditya, founder and CEO of the world's most effective math learning platform – Elephant Learning. Build math intuition and overcome math anxiety from preschool to middle school mathematics with a low monthly subscription fee.

Elephant Learning is a story about the concerning math proficiency statistics that continue to trend down. Students begin that downward spiral as early as pre-school. Our platform equips parents and children with the tools necessary to fully understand math concepts and ultimately build confidence. I know that it is never too late to understand math. At a young age, many of us had the experience of being told that "we are just not a numbers person." Books have been written on this social phenomenon, and half of all Americans report having math anxiety. As it turns out, mathematics is really about learning jargon, a jargon that is so fundamental to humanity that we consider it vocabulary.
